OFFICE OF
The Deputy Commissioner,
Shimoga District,
Shimoga,

Date 16th January 1943.

The Secretary
to the Government of His Highness the Maharaja of Mysore,
Law Department,
Bangalore.

Sir

Subject - Water Supply Scheme to Channagiri Town from the existing bore-wells.

I have the honour to state that considerable difficulty for drinking water [illegible] has been felt in Channagiri Town and there is need for a Water Supply Scheme for this Town This was also brought by the Towns people, to the notice of the Minister for Local Self-Government and Public Health, during his visit on 22nd November 1942 He was pleased to instruct that a report may be submitted in the matter

2 I have looked into this matter The wells in the Town are mostly brackish water wells There are only two or three drinking water wells, but they do not give an adequate supply of water and further, they dry up in Summer, The bore-well Scheme has been tried Four Bore-wells were put up and one was unsuccessful and the other three, which are estimated to yield a total quantity of 5870 gallons per hour have not been of help for want of a Pumping arrangement into a Reservoir from which water may be drawn by means of pipes and taps

3 A Water Supply Scheme for this purpose was prepared by the Department of Public Health in December, 1940, on a reference from the Channagiri Municipality through this office The Scheme consists of connecting the three Bore-wells by an Air Lift Plant drawing the water into a common suction well and then pumping the water

water into an elevated Reservoir located at the highest point in the Town The proposal is to draw the water supply from this Reservoir and distribute into the Town through Public Fountains by pipe system. The Scheme provides for 26 Public Fountains and about 50 house connections A detailed estimate of this Scheme has been prepared and it amounts to Rs 46.125/- The Report, estimate, and the Plan (received with letter No 1037-16 dated 4-2-1941 from the Director of Public Health) explaining the Scheme and the details are herein enclosed for kind reference

4. The question of financing the Scheme was considered by the Channagiri ~~Town~~ Municipal Council at the meeting held on 27-2-1941. The Council resolved that Government ~~will~~ may be requested to make a grant of half the amount of the estimate and sanction a loan for the other half amount, repayable in twenty annual instalments. The Council have not pointed out the source from which they would pay these instalments and the interest. As regards the annual maintenance charges of Rs 2000/- ~~a year~~, the Council have proposed to levy a special water rate on house and vacant site tax at the rate of 0-8-0 per rupee That is expected to yield about Rs 1320/- The balance of about Rs 700/- per year is proposed to be met from the General Revenues of the Municipality

5. When the matter came up from the Municipality, the Deputy Commissioner (Mr M Seshadri) ordered on 2-4-1941 that the Scheme could be taken up only after Channagiri Town gets Electric Power By that time, a Scheme for Electrification of the Channagiri Town and some villages at a total cost of Rs 1,44,600/- had been sanctioned by Government (Vide Government Order No EDS 1761-65 dated 19-8-1941) It was expected that the Electrification work could be put on hand soon

6 Subsequently, the Electrification Scheme could not taken up for execution on account of the great difficul in getting the required materials due to the War Conditio

Consequently, the Water Supply Scheme has been held up

7 The financial condition of the Municipality is low and poor The average income of the Municipality from all sources is Rs 9,000/- and the average expenditure also works out at about the same figure It has no capacity for repaying a loan and there are no such resources for improving the income This Municipality, therefore, deserves special financial help from Government for the Water Supply Scheme which is necessary in view of the great ~~supply~~ difficulty for drinking water

8 But as Electricity is necessary for pumping water according to this Water Supply Scheme, and as the required materials cannot be had in the present situation, it would not be possible to take up this Scheme at present In these circumstances, the question has, perhaps, to wait till the normal conditions return and the Town gets Electric ~~Power~~

I have the honour to be,
Sir,
Your most obedient servant,

The Deputy Commissioner, (in charge)
Shimoga District

Put with a draft reply for orders

Sir

Improvement of Water Supply to the Shenagiri Town

May-'D'

With reference to your letter No L 7644/11 74-43-6 dated 4th February 1943 calling for certain information on the above subject, I have the honor to state that the Sanitary Engineer in his No 1152 dated 22nd February 1943 reports that since the air-lift plant is not available, it will be necessary to instal on each borewell, deep well pumps driven by oil engines The three deep well pumping sets thus required are not available in the market, and machinery obtained may not be of correct specification and maximum efficiency and this too at considerable cost Above all this there is the question whether the municipality would be able to bear the maintenance of the three oil installations in addition to increased initial cost. The Sanitary Engineer further reports that the rates provided in the estimate for G I pipes are pre-war rates and at the present market rate, the amount of the revised estimate will be over Rs 75,000/-

Under the above circumstances, it is for orders of Government whether the scheme may not be deferred till return to normal times

A copy of Sanitary Engineer's Memo No.1152 dated 22nd February 1943 is enclosed for the information of Government

The records are retransmitted herewith

I have the honour to be,
Sir,
Your most obedient servant,
G Ban[illegible]

No 1152/Records

Memo

Subject - Water supply scheme to Channagiri town from the existing 3 borewells

Resubmitted -
The Director of Public Health's No C 1037-19/39-40 dated 8th February 1943

The scheme for Rs 46,135/- consists of connecting the three borewel which have a total yield of 3,870 gallons per hour, by an air lift plant drawing water into a common suction well and then pump the water to the elevated reservoir located in the highest point in the town If the scheme is now to be worked out the following points have to be considered

1 Since the air-lift plant is not available it will be necessary to instal on each borewell deep well pumps driven by oil engine This means 3 separate pumping sets and stations and it is a poi for consideration whether the municipality can bear the Mainten of these three installations in addition to increased first cos

2 Further, even these deep well pump sets are not available in the market and we get only machinery not quite to correct specifications and to maximum efficiency and this at considerab cost

3 The scheme was prepared during 1940 for G I pipes and special pre-war rates have been provided in the estimate as follows-

1½" G I pipes	0- 9- 0 per ft
1" "	0- 6- 0 "
¾" "	0- 4- 0 "

The present rates are as follows -

1½" G I pipes	7- 0- 0 ft
1"	4- 8- 0 "
	3- 4- 0 "

The estimate would, therefore, require considerable revision and it will be over Rs 75,000/- Under these circumstances, it is suggested that the scheme may lie over for the present till conditions return to normal

Sd C R Iyengar
Sanitary Engineer
